## Monitoring Data

Volume II of the *Site Environmental Report for 2005* is provided by Ernest Orlando Lawrence Berkeley National Laboratory as a supplemental appendix to Volume I, which contains the body of the report. Volume II contains the environmental monitoring and sampling data used to generate summary results of routine and nonroutine activities at the Laboratory (except for groundwater sampling data, which may be found in the reports referred to in Chapter 4). Volume I summarizes the results from analyses of the data.

The results from sample collections are more comprehensive in Volume II than in Volume I: For completeness, all results from sample collections that began or ended in calendar year (CY) 2005 are included in this volume. However, the samples representing CY 2004 data have not been used in the summary results that are reported in Volume I. (For example, although ambient air samples collected on January 3, 2005, are presented in Volume II, they represent December 2004 data and are not included in Table 4-2 in Volume I.)

When appropriate, sampling results are reported in both conventional and International System of Units (SI). For some results, the rounding procedure used in data reporting may result in apparent differences between the numbers reported in SI and conventional units. (For example, stack air results reported as < 1.1 Bq/m<sup>3</sup> are shown variously as < 29, < 30 and < 31 pCi/m<sup>3</sup>. Each of these results is rounded correctly to two significant digits.)

The list below categorizes the Volume II data sections with corresponding sections in Volume I:

Volume II section	Volume I Section
Stack Air	Section 4.2.1
Ambient Air	Section 4-2
Rainwater	Section 4.3.1.1
Creeks	Section 4.3.1.2
Stormwater	Section 4.3.1.3
Sewer	Sections 4.3.2.2–4.3.2.3
Fixed Treatment Units	Sections 4.3.2.4–4.3.2.5

<b>Volume II section</b>	<b>Volume I Section</b>
Soil	Section 4.5.1
Sediment	Section 4.5.2
Vegetation	Section 4.6

The results listed in Volume II identify sampling locations with a station identifier code. The following list cross-references these codes with a more meaningful and descriptive label:

<b>Location code</b>	<b>Description of sampling location</b>	<b>Volume II section</b>
25 FTU	Building 25 fixed treatment unit	Fixed Treatment Units
55-128	Building 55, Room 128	Stack Air
55-128 Backup	Building 55, Room 128 inline backup sample (55-128 Backup results are added to 55-128 results to represent total emissions from the location)	Stack Air
69-Storm Drain	Building 69 storm drain inlet	Stormwater
70-103H	Building 70, Room 103 hood	Stack Air
70-147A	Building 70, Room 147A Berkeley box manifold	Stack Air

The following units are used in Volume II:

Unit	Description	Pertains to:
%	Percent	Moisture content of sample
$\mu\text{g/L}$	Micrograms per liter	Concentration of analyte (nonradioactive) in liquid
$\mu\text{mhos/cm}$	Micromhos per centimeter	Specific conductance in liquid
Bq/g	Becquerels per gram	Activity of analyte (radioactive) in solid
Bq/L	Becquerels per liter	Activity of analyte (radioactive) in liquid
Bq/ $\text{m}^3$	Becquerels per cubic meter	Activity of analyte (radioactive) in air
Bq/S	Becquerels per sample	Activity of analyte (radioactive) in blank samples
mg/L	Milligrams per liter	Concentration of analyte (nonradioactive) in liquid
pCi/g	Picocuries per gram	Activity of analyte (radioactive) in solid
pCi/L	Picocuries per liter	Activity of analyte (radioactive) in liquid
pCi/ $\text{m}^3$	Picocuries per cubic meter	Activity of analyte (radioactive) in air
pCi/S	Picocuries per sample	Activity of analyte (radioactive) in blank samples
S.U.	Standard units	pH measurement

### ***Results Below the Detection Limit***

Nonradiological results that cannot be quantified (because they are below the detection limit of the analysis) are reported as less than the reporting limit (for example, “< 10  $\mu\text{g/L}$ ”). Radiological results that cannot be quantified are generally reported as less than the minimum detectable activity (MDA) (for example, “< 0.15 Bq/L”). When the MDA is not available, the reporting limit is used. Reporting limits are typically constant between sample results for a particular analyte, but MDAs can vary between sample results for any one analyte.
